

HN INFRARED QUARTZ HALOGEN HEATERS

What is an Infrared Quartz Halogen Heater?

A shortwave radiant heater which heats people directly not the surrounding air. As they are instantly effective, these heaters are ideal for spot heating areas within larger industrial premises and also heating intermittently used buildings like churches, village halls and schools.

Key Features

- Replaceable halogen lamp with 7000 hours average operating life
- Wall bracket with 'up and down' and 'side to side' angle adjustment
- Can be suspended (optional suspension kit available)
- 1m power lead (2-core and earth)
- Magic Lamp option for reduced light output and zero-glare (M suffix)

Energy Saving Tip

Control with a TS-7 run down timer to avoid heating an unoccupied area.
